All current Claude models (`Fable 5.2`, `Opus 5.5`, `Sonnet 5.5`, `Haiku 5.5`) include a 1M-token context window (128K output) — 5× larger than legacy 200K limits — allowing full interview transcripts, telemetry summaries, and PRDs in one thread. Solo PMs use **Free ($0, up to 5 Projects)** or **Pro ($20/mo; $17 annual)**; squads run **Team Standard ($20 annual / $25 monthly)** or **Premium ($100/$125)** for shared context and no default training (claude.com/product/overview).

1. Core PM Deliverable Workflows

- **Complete PRDs With Explicit Non-Goals:** Prompt problem evidence, persona, success metrics, engineering open questions, and hard **out-of-scope** boundaries.
- **Edge-Case & Accessibility User Stories:** Generate happy path, error states, permissions/admin roles, and accessibility acceptance criteria together.
- **1M-Context Discovery Synthesis:** Drop multi-call interview transcripts and NPS exports into one `Fable 5.2` or `Sonnet 5.5` session for theme extraction.

2. Stakeholder Translation & Backlog Triage

- **Dual-Audience Translation:** Turn engineering specs into 1-page VP briefings, and convert executive priorities into concrete engineering acceptance tests.
- **Structured RICE Scoring:** Force explicit assumptions when scoring Reach, Impact, Confidence, and Effort so leadership reviews challenge the inputs directly.
