Devplan: Seattle AI Profile — Product, Footprint & Verified Record

Verified: November 19, 2026 · Canonical URL: https://tygartmedia.com/devplan-seattle-wa-ai-profile/

Verified Record Summary: As of November 19, 2026, Devplan (Devplan Inc.) operates independently from Seattle's AI House on Pier 70, building an AI-native product management and engineering coordination platform for software teams adopting AI coding agents. Founded in 2025 by Chris Bee and Anton Safonov, the company emerged from stealth in June 2026 with a $2.5 million seed round led by the AI2 Incubator.

Field	Verified Record (As of Nov 19, 2026)
Company	Devplan (Devplan Inc.)
Official Website	https://www.devplan.com/
Washington HQ	Seattle, WA (based at AI House on Pier 70)
Other WA Footprint	AI2 Incubator spinout (Seattle, WA)
Founded	2025 (emerged from stealth June 18, 2026, per GeekWire)
Founders / Leadership	Chris Bee (Co-Founder & CEO), Anton Safonov (Co-Founder & CTO)
Stage	Seed
Announced Funding	$2.5M seed (announced June 18, 2026, per GeekWire); led by AI2 Incubator with Acequia Capital, Mighty Capital, Grand Ventures, and eLab Ventures
Team Size	6-7 employees (GeekWire, June 2026)
Primary Ecosystem Ties	AI2 Incubator / AI House (Pier 70, Seattle); Acequia Capital; Amazon and Zillow alumni

What Devplan Builds

Devplan builds an AI-native product management and engineering coordination platform aimed at removing the planning overhead, status meetings, and scattered context that slow down software teams even as AI coding accelerates implementation. Its core system, **Weaver**, connects to GitHub, Jira, Linear, Slack, support tools, and meeting notes to maintain a structured knowledge graph—termed a "Product brain" on devplan.com—linking customer demand, product decisions, and live code.

Rather than rescanning raw repositories and documents on every prompt, Devplan pre-processes company context into its knowledge graph, which CEO Chris Bee told GeekWire runs queries roughly twice as fast and more than three times cheaper. From that context, Devplan ranks evidence-backed feature proposals, writes linked technical specifications with code-informed effort estimates, syncs tickets to Jira or Linear, and passes specs directly into AI coding tools including Claude Code (via MCP), Cursor, and Codex.

Washington Footprint and Leadership

Devplan is headquartered in Seattle, operating out of **AI House on Pier 70** as an active spinout of Seattle's **AI2 Incubator** (listed on the AI House Incubator directory without any acquisition marker). Its website and About page publish product, leadership, and press disclosures under Devplan Inc.

The company was co-founded in 2025 by **Chris Bee** (Co-Founder & CEO), a former startup CTO and engineering and product executive with over two decades building software at Amazon, Uber, Zillow, and Lessen, and **Anton Safonov** (Co-Founder & CTO), a former infrastructure and data systems engineer at Snap, Meta, and LinkedIn. According to June 2026 GeekWire coverage, the founders met on a youth soccer pitch where Safonov coached Bee's daughter and bonded over the coordination burden surrounding software delivery.

Products, Users, and Public Traction

Devplan targets fast-growing software startups, scale-ups, product managers, and engineering organizations integrating AI coding agents into daily production work. Following quiet testing with an initial group of customers, Devplan opened broader availability in June 2026; devplan.com offers a self-serve onboarding path with $100 in free credits (no credit card required) alongside direct sales inquiries and a free PRD template.

Named customers highlighted on Devplan's website and in its published Tato customer story include **Tato**, **Eight Sleep**, **Axiad**, **Wealth Access**, and **Kivo Health**. At its June 2026 launch, GeekWire reported a team of six to seven employees; revenue and total customer counts are not publicly disclosed.

Funding, Stage, and Place in Washington's AI Landscape

Devplan emerged from stealth on June 18, 2026 with a $2.5 million seed round reported by GeekWire and highlighted on Devplan's Press page. The round was led by **AI2 Incubator**, with participation from Seattle-based **Acequia Capital**, **Mighty Capital**, **Grand Ventures**, and **eLab Ventures**. No subsequent funding round or acquisition has been publicly disclosed through November 2026.

Within Seattle's developer-tools and engineering-AI cluster, Devplan tackles the upstream specification and coordination bottleneck created when AI coding agents dramatically speed up code generation. Based at AI House on Pier 70, it sits alongside local peers addressing adjacent stages of agentic software engineering, including multi-agent orchestration, coding-agent telemetry, and automated testing.
