Harell Data: Bellevue AI Profile — Product, Footprint & Verified Record

Verified: November 19, 2026 · Canonical URL: https://tygartmedia.com/harell-data-bellevue-wa-ai-profile/

Verified Record Summary: As of November 19, 2026, Harell Data Corp. operates Harell Cloud at harelldata.com, connecting AI modelers with proprietary scientific datasets from early partners including Adaptive Biotechnologies and A-Alpha Bio. The Bellevue startup emerged from stealth in August 2026 with $15M in funding from Fuse, Cercano Management, and other backers, and joined the Fall 2026 GeekWire 200.

Field	Verified Record (As of Nov 19, 2026)
Company	Harell Data (Harell Data Corp.)
Official Website	https://harelldata.com/
Washington HQ	Bellevue, WA (also maintains a Palo Alto, CA office)
Other WA Footprint	Initial data partners include Seattle-based A-Alpha Bio and Seattle-based Adaptive Biotechnologies
Founded	2026 (GeekWire 200 Fall 2026; emerged from stealth August 17, 2026)
Founders / Leadership	Harlan Robins, PhD (Founder & President), Rakesh Nair (CTO), Saray Covey (Head of Operations), Analise Polsky (Head of Sales)
Stage	Early / Seed
Announced Funding	$15M (Fuse, Cercano Management, and others; GeekWire, Aug 17, 2026)
Team Size	11 reported at August 2026 launch (Bellevue and Palo Alto); 9 listed on Fall 2026 GeekWire 200
Primary Ecosystem Ties	GeekWire 200 (Fall 2026); Fuse; Cercano Management; Adaptive Biotechnologies; A-Alpha Bio

What Harell Data Builds

Harell Data Corp. builds **Harell Cloud**, a secure cloud infrastructure and data-marketplace platform that connects AI model builders with curated proprietary scientific datasets without requiring data owners to hand over raw files. As GeekWire reported on August 17, 2026, the company was created to break open scientific data silos: research groups spend millions generating high-value experimental datasets but have lacked a secure commercial mechanism to monetize them for AI training.

On harelldata.com, Harell Cloud presents three core layers—**Data**, **Models**, and **Inference**—deployed on CoreWeave GPU infrastructure (NVIDIA A100 and Hopper GPUs) so machine learning teams train and fine-tune models in place inside a protected environment. Instead of waiting years for speculative downstream drug royalties, data creators earn a direct share of the compute revenue generated during training runs. While Harell Data is starting in computational medicine and immunology, founder Harlan Robins told GeekWire the architecture is designed to extend across scientific domains including materials science and imaging.

Washington Footprint and Leadership

Harell Data is headquartered in **Bellevue, Washington**, with a split team operating between Bellevue and Palo Alto, California, as reported by GeekWire on August 17, 2026. Its founding ties run directly through Seattle's biotechnology cluster: founder **Harlan Robins, PhD** co-founded Seattle-based Adaptive Biotechnologies, served as its Chief Scientific Officer building large-scale immune-system datasets, and continues consulting on scientific strategy there. Robins told GeekWire the company's name came from his 8-year-old son Ellis, combining "Harlan" and "Ellis."

Alongside Robins as Founder and President, GeekWire's launch report and company materials on harelldata.com/about-us/ identify an initial executive team including **Rakesh Nair** (Chief Technology Officer), **Saray Covey** (Head of Operations), and **Analise Polsky** (Head of Sales). Headcount varies slightly across two dated primary snapshots: GeekWire reported an 11-person team split between Bellevue and Palo Alto at its August 17, 2026 launch, whereas the Fall 2026 GeekWire 200 index listed 9 employees. The active website is harelldata.com, while harelldata.ai holds a "Launching Soon" landing page.

Products, Users, and Public Traction

Harell Data serves two sides of computational science: life-sciences and research organizations holding proprietary experimental datasets, and AI research teams seeking curated data and GPU compute to train biological foundation and prediction models. Early access for Harell Cloud launched alongside the August 2026 announcement with initial proprietary datasets contributed by Seattle-based **A-Alpha Bio** and **Adaptive Biotechnologies**, per GeekWire.

Active scientific community usage is also documented on Harell Data's LinkedIn page, which details proprietary TCR-peptide datasets provided by Adaptive Biotechnologies Corp. on Harell Data for the **CASP-DREAM TAP Challenge** (organized with Conscience, DREAM Challenges, and Sage Bionetworks)—including more than 1,000,000 unique fully paired alpha/beta TCRs tested against over 1,500 peptides for HLA-A*02:01 and more than 27,000 TCRs tested against over 380 peptides for HLA-B*27:05. Harell Data also partners with CoreWeave for NVIDIA GPU cloud capacity. Revenue figures and total paying customer counts are not publicly disclosed.

Funding, Stage, and Place in Washington's AI Landscape

Harell Data emerged from stealth on August 17, 2026 with **$15 million** in early-stage funding backed by Bellevue-based **Fuse**, **Cercano Management**, and additional unnamed investors, according to GeekWire. Following its launch, the company entered the Fall 2026 GeekWire 200 startup index (listing Bellevue HQ, $15M raised, and 2026 as its founding year). No subsequent financing round or acquisition has been announced through November 2026.

Within Washington's biotech and scientific AI cluster, Harell Data targets the underlying data-access and incentive bottleneck separating wet-lab data generators from AI model developers. While Seattle peers build autonomous experimental agents, live-cell analysis engines, and oncology drug-discovery pipelines, Harell Data provides neutral cloud infrastructure and compute-revenue sharing aimed at making proprietary scientific datasets usable for model training without sacrificing IP control.
